

COMP251 - Lab9

Goal: This lab will give you practice with Quick Sort.

Getting Started

Download the files for this lab from blackboard. Class QuickSort which implements quick sort. Create an empty project in Eclipse and call it "QuickSort". Add class: QuickSort. The main() method of QuickSort includes test code.

You need to implement the function partition(), just like the algorithm we discussed in class.

Submission

Put all source codes (.java files) in one folder, zip it and upload it on Blackboard.
